

Infrastructure and Redevelopment

ABZ staff has provided our clients unparalleled expertise in project scoping, development, operations, modifications, decommissioning and repurposing retired power plants. We put our experience to work in solving problems with tailored consulting that includes cost-effective solutions to meet our clients specific needs. This is what makes ABZ the ideal partner to address challenges facing companies who are decommissioning infrastructure and developers.

At ABZ, we understand the significance of having the right combination of professionals assigned to each of our client's projects. We are committed to providing qualified, experienced consultants and technical personnel for a successful end result.

Our expertise captures the infrastructure marketplace by working with our clients to assess the optimum solution. In addition to our in-house staff, our business relationships and partners allow us to draw from a global industry including Architectural and Engineering firms, Procurement and Construction companies to Industry Technology Providers.

At ABZ, we provide energy and infrastructure solutions to include:

- Site evaluation and planning
- Physical decommissioning
- Environmental disposition
- Property redevelopment
- Battery and new technology Energy Storage
- Alternative and Renewable energy
- Data centers and
- Repurposing of property from commercial, industrial, retail to residential options.

In addition to business and technical consulting, ABZ provides our clients with a Project Management and Project Controls team that is onsite and in the boardroom, working to meet project timelines and schedules, reviewing cost and budget, with subcontractors, suppliers and stakeholders.

ABZ are the Project Managers to provide our clients with metrics and performance indicators that assesses the risk and mitigate issues that arise on a complex project to ensure a successful outcome.
